PRESS RELEASE · Content & sentiment · 23 Nov 2026

From AI Tools to AI Agents: TechnoBridge Launches 18-Week Hands-On Generative AI & Agentic AI Course

PUNE, INDIA | 23 November 2026 — TechnoBridge Systems has introduced an 18-week Generative AI & Agentic AI course to help learners move from using AI tools to building useful AI applications. The course includes 90 instructor-led sessions, with two hours of training five days a week, making a total of 180 hours. Learners can join live online from across India or attend classroom sessions at TechnoBridge's Shivajinagar/FC Road and Hinjewadi centres in Pune.

The program is designed for fresh graduates, software developers and working professionals. It covers Python, AI models, chatbots that use business documents, workflow automation and AI agents that can complete tasks using connected tools. Learners work on 20+ practical projects and one separate industry-focused capstone project. Weekly assignments, trainer reviews and GitHub project portfolios are also part of the training.

Moving Beyond Everyday AI Tools

AI helps people write, research, create images and complete daily tasks. But using a chatbot is different from building a reliable AI system for a business. Such a system may need to search company documents, connect software and complete tasks safely. The World Economic Forum's Future of Jobs Report 2025 lists AI and big data among the fastest-growing skills expected through 2030. TechnoBridge's course therefore focuses on practical skills beyond writing prompts.

For example, a business may need an assistant that answers questions using its own documents or a system that sorts customer enquiries. These applications need reliable information, clear instructions and human checks. The course also explains common problems such as incorrect AI answers, privacy risks and running costs.

Learn AI. Build AI. Apply AI.

TechnoBridge follows a three-step learning approach: “Learn AI. Build AI. Apply AI.” First, learners understand what AI can do, where it can make mistakes and how to use it well. They learn Python, prompting, data analysis and fact-checking while exploring tools such as ChatGPT, Claude, Gemini, DeepSeek and Llama. Next, they build applications by connecting AI models with data and software. Finally, they apply their skills to customer support, document analysis and automation.

Each stage builds on the previous one. Learners start with small exercises and a Python project. Later, they create larger applications, test the results and keep their work on GitHub. At the end, they present and explain a complete project.

An 18-Week Curriculum: From Basics to Working AI Applications

The course starts with Python, a programming language widely used in AI development. Learners then practise writing organised code and using Git and GitHub to save and manage their projects. They also learn to study information from documents and spreadsheets, work with data using Python and SQL, and create selected image, video and voice-based content using AI tools.

Later lessons cover large language models and tools such as Hugging Face and LangChain. Learners build chatbots using Retrieval-Augmented Generation (RAG). Put simply, RAG helps a chatbot search selected documents before answering a question. Students learn to check and improve those answers. They also use PostgreSQL to store data and FastAPI to connect chatbots with other applications.

The automation module uses n8n to connect steps in a business process. For example, a workflow may collect an enquiry and update a spreadsheet or customer management system. Learners then explore AI agents, which use approved tools to complete tasks. Topics include LangGraph, memory, Model Context Protocol (MCP), cooperation between agents and human approval. Voice AI lessons show how assistants can speak with users and transfer conversations to a person.

The final modules explain how to test, secure and launch AI applications. Learners are introduced to Docker, GitHub Actions, cloud deployment and ways to monitor errors and running costs. The aim is to show that building an AI application is only one part of the job; it must also work reliably and protect user information.

20+ Practical Projects and a Capstone Industry Project

Practical learning is central to the programme. The 20+ projects range from simple exercises to applications that combine different tools. Examples include a research assistant that organises documents, a chatbot that answers questions from selected files, a customer-enquiry chatbot, an n8n automation workflow and an agent that uses approved tools. Learners also practise putting AI applications online.

Activities also cover data analysis, AI-assisted creative content, voice assistants and checking chatbot answers. Learners submit work each week and explain how it functions and what they could improve. Important projects are saved on GitHub with instructions and test results. Reviews cover research, chatbots, automation, AI agents and deployment.

In Week 18, learners complete a separate industry-focused capstone. They may choose a business knowledge assistant, support agent, document workflow, voice appointment assistant or multi-agent research system. They plan, build and test the application, prepare documents and give a live demonstration. They answer technical questions to show they understand their work. Projects use sample or approved information where needed.

Live Classes, Weekly Practice and Trainer Feedback

TechnoBridge uses live teaching along with hands-on tasks. Each week, learners complete an assignment, receive feedback and explain their work in a short review or question-and-answer session. This helps them identify mistakes and practise new skills before moving to more advanced topics.

The course runs for 18 weeks, with 90 live sessions of two hours each, for a total of 180 hours. Learners can attend classroom training in Pune or join instructor-led online sessions from elsewhere in India, depending on the available batch schedule.

Learning Options for Graduates and Working Professionals

Fresh graduates begin with programming and AI basics before creating applications. Software developers learn how to add AI features to existing systems and build chatbots, workflows and AI agents. Working professionals can explore AI for research, reporting, customer service and routine business tasks.

The course expects basic computer skills, comfort with websites and spreadsheets, and logical thinking. Some knowledge of Python can help. Learners who are new to programming may need extra preparation. Progress will depend on each person's background, practice and participation.

Project Portfolios and Career Assistance

TechnoBridge also supports career preparation through GitHub portfolio building, resume and LinkedIn guidance, mock interviews and help finding relevant job openings. The final project gives learners work to demonstrate in interviews. Placement assistance does not guarantee a job or salary; outcomes depend on each learner's skills, qualifications and employer requirements.

About TechnoBridge Systems

TechnoBridge Systems is a professional training institute based in Pune. It offers career-focused courses in technology, healthcare and related fields. Its Generative AI & Agentic AI course combines live teaching, practical projects and career preparation for learners attending in person or online.

Visibility score breakdown

SENTIMENT	SEO	DA	PA
10/10	12/20	15/10	5/10
Tone of the coverage towards your brand.	Keyword use, structure and depth of the article.	**Domain Authority:** trust in the publishing sites.	**Page Authority:** ranking power of each article.

TRAFFIC	SOURCE	COVERAGE	PLACEMENT
10/20	5/10	10/10	10/10
Estimated visits the published pages attract.	Credibility and tier of the publishing outlets.	Breadth of pickup across outlets and regions.	Prominence of the article on publisher sites.

SEO STRENGTH · How well the article is optimised for search

SCORE 12/20

TARGET KEYWORD	USAGE
Generative AI course	3 Times

Assessment: The piece uses the target keyword three times, including a natural occurrence, earning a modest keyword usage score. However, it lacks clear H2/H3 headings, bullet points, and does not meet the 800-word threshold, limiting its structural score. On the other hand, the content offers thorough coverage of subtopics,...

DISCLAIMER · UNDERSTANDING YOUR SCORE

Visibility builds over time

A newly published PR article is much like a newborn learning to walk — it cannot run on day one. In the same way, Google needs time to discover, crawl, understand and index each new article. Initial scores may therefore be low and should be read as a starting point, not the final result.

1 Discover — 2 Crawl — 3 Understand — 4 Index

How you can improve PR visibility

01

Social media

Share the articles on LinkedIn and other social media platforms.

02

Website visibility

Add the publication links to an “As Featured In” section on your official website.

03

Owned channels

Promote the articles through your newsletters and email signatures.

Important: Scores may improve over time as visibility and other performance signals develop.

Reading this report

Domain Authority (DA)

A 0–100 score of how much search engines trust a website overall. Higher DA means links from that site carry more weight.

Page Authority (PA)

The same idea for a single page — how likely that specific article page is to rank in search.

Potential audience

The estimated readership of each outlet. It shows how many people could see your story, not confirmed views.

Earned media

Coverage a newsroom writes on its own initiative — a bonus beyond distribution.

Indexation

When search engines add the published pages to their results. This takes days to weeks, which is why SEO impact builds over time.

AI answer engines

Tools like ChatGPT, Perplexity and Google AI that answer questions directly, drawing on trusted published sources.

Thank you.

Your coverage stays live and keeps building visibility. Thank you for choosing us to share your story.
