BATTERY CARE

If you have an electric Reid product, here are some tips for looking after the battery to prolong the life of the unit and to ensure user safety:

Never leave batteries charging in a building that is unattended or overnight when you are sleeping in the property.

Unplug or disconnect from the battery once charging is complete. Do not allow the battery to overheat and ensure it is charged on a hard surface where heat can disperse.

Regularly monitor and assess for damage to the battery and the charger, following the manufacturer's guidance for replacement or repairs.

Ensure smoke alarms – preferably interlinked detectors around the property - are fitted where charging is taking place and, if possible, store and charge away from the main living area.

If your eBike or eScooter is to be left unused for a prolonged period of time, ensure that you top up the battery charger at least every 3 months to prolong the life of the cells.

Batteries should be stored between 5C and 30C to prolong the life of the battery cells and reduce degradation.
